

$$T: \mathbb{R}^2 \rightarrow \mathbb{R}^3 \quad T(1, -1) = (3, 2, -2)$$

$$T(-1, 2) = (1, -1, 3)$$

Pergunta: Determine $T(x, y)$

Passo 1: Escrever x, y como combinação Linear.

$$a(1, -1) + b(-1, 2) = (x, y)$$

Passo 2: transformar num sistema

$$\begin{cases} a - b = x \\ -a + 2b = y \end{cases}$$

Passo 3: Resolver Equações a e b

$$\begin{array}{r} -a + 2b = y \\ +a \\ \hline 2b = y + a \\ \hline b = \frac{y + a}{2} \end{array}$$

$$\begin{array}{r} a - b = x \\ a - \frac{y + a}{2} = x \\ \frac{2a - y + a}{2} = \frac{2x}{2} \\ 3a - y = 2x \\ 3a - y = 2x \\ + y + y \\ \hline 3a = 2x + y \\ a = \frac{2x + y}{3} \end{array}$$

$$\begin{array}{r} b = \frac{y + a}{2} \\ b = \frac{y + (\frac{2x + y}{3})}{2} \\ b = \frac{3y + 2x + y}{6} \\ b = \frac{2x + 4y}{6} \\ b = \frac{x + 2y}{3} \end{array}$$

$$\begin{cases} a - b = x \\ -a + 2b = y \end{cases}$$

Soma das equações

$$\begin{array}{rcl} (a - b) + (-a + 2b) & = & x + y \\ (a - a) + (-b + 2b) & = & x + y \\ 0 + (-b + 2b) & = & x + y \\ = 0 + (1b) & = & x + y \\ = 0 + b & = & x + y \\ = b & = & x + y \end{array}$$

$$\begin{array}{rcl} a - (x + y) & = & x \\ a - x - y & = & x \\ +x & + & x \\ \hline a & = & 2x + y \end{array}$$

Passo 4: aplicar T $\vec{u} = (3, 2, -2)$ $\vec{v} = (1, -1, 3)$
 $a = 2x + y$ $b = x + y$

$$T(x, y) = T(a \times \vec{u} + b \times \vec{v}) = a \times T(\vec{u}) + b \times T(\vec{v})$$

$$2x + y \times (3, 2, -2) + x + y \times (1, -1, 3)$$

$$2x + y \times \begin{bmatrix} 3 \\ 2 \\ -2 \end{bmatrix} + x + y \times \begin{bmatrix} 1 \\ -1 \\ 3 \end{bmatrix}$$

1ª coordenada

$$\begin{array}{rcl} (2x + y) \times 3 + (x + y) \times 1 & = & \\ 6x + 3y + 1x + 1y & = & \\ 7x + 4y & = & \end{array}$$

2ª coordenada

$$\begin{array}{rcl} (2x + y) \times 2 + (x + y) \times (-1) & = & \\ 4x + 2y + (-1x - 1y) & = & \\ = 3x + 1y & = & \\ = 3x + y & = & \end{array}$$

3ª coordenada

$$\begin{array}{rcl} (2x + y) \times (-2) + (x + y) \times 3 & = & \\ -4x - 2y + 3x + 3y & = & \\ = -1x + 1y & = & \\ = -x + y & = & \end{array}$$

$$\text{Resultado: } T(x, y) = (7x + 4y, 3x + y, -x + y)$$

Verificação

$$T(1, -1) = (7 \times 1 + 4 \times (-1), 3 \times 1 + (-1), -1 + (-1)) = (3, 2, -2) \checkmark$$

$$T(-1, 2) = (-7 + 8, -3 + 2, 1 + 2) = (1, -1, 3) \checkmark$$
