

$2\vec{v}$: mesma direção, comprimento dobrado.

$-1\vec{v}$: mesmo comprimento, direção oposta.

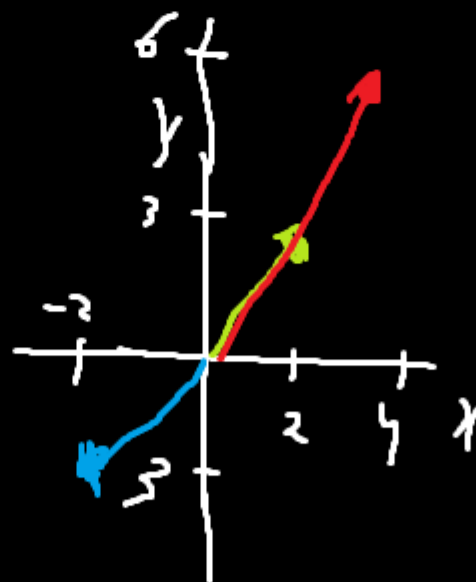

$\frac{1}{2}\vec{v}$: mesma direção, metade do comprimento.

$$2\vec{v} = 2 \times \begin{bmatrix} 2 \\ 3 \end{bmatrix} = \begin{bmatrix} 4 \\ 6 \end{bmatrix}$$

$$-1\vec{v} = -1 \times \begin{bmatrix} 2 \\ 3 \end{bmatrix} = \begin{bmatrix} -2 \\ -3 \end{bmatrix}$$

$$\frac{1}{2}\vec{v} = \frac{1}{2} \begin{bmatrix} 2 \\ 3 \end{bmatrix} = \begin{bmatrix} 1 \\ 1,5 \end{bmatrix}$$
